

Difference

- There are 2 types of intents, implicit intents and explicit intents.
- Since explicit intent interacts with the activities within its own activities, explicit intents are generally more secure.
- SecondFragment.kt has implicit extent in line 69 to 73.
- ThirdFragment.kt has explicit intent in line 68 to 70.
- The SecondFragment.kt has implicit intent that starts an activity to open a webpage in the browser that it is not supposed to open.

The implicit intent in SecondFragment.kt is done in incorrect manner. After a successful register, the activity starts another activity with the help of implicit intent that opens the website with all the gift card data.
